

SEG Awards Level 2 Certificate in Welding Techniques and Skills

Qualification Guidance

Level 2 Certificate - 603/5759/9

This is a live document and as such will be updated when required. It is the responsibility of the approved centre to ensure the most up-to-date version of the Qualification Guide is in use. Any amendments will be published on our website and centres are encouraged to check this site regularly.

About us

At the Skills and Education Group Awards (SEG Awards)¹ we continually invest in high quality qualifications, assessments and services for our chosen sectors. As a UK leading sector specialist we continue to support employers and skills providers to enable individuals to achieve the skills and knowledge needed to raise professional standards across our sectors.

Skills and Education Group has an on-line registration system to help customers register learners on its qualifications, units and exams. In addition it provides features to view exam results, invoices, mark sheets and other information about learners already registered.

The system is accessed via a web browser by connecting to our secure website using a username and password: https://ors.skillsandeducationgroupawards.co.uk/

Sources of Additional Information

The Skills and Education Group Awards website https://skillsandeducationgroupawards.co.uk/ provides access to a wide variety of information.

Introduction

- At Skills and Education Group Awards we have updated our suite of Fabrication and Welding qualifications to include the latest fabrication and welding techniques, materials, processes and practices. They are assessed in line with industry demands, which include updated rigorous practical assessments and online on-demand assessments.
- The qualification structures have been developed with the typical learner in mind, to ensure the units contained within them are relevant and facilitate progression, whether that is onto higher levels of learning, employment or specialist fabrication and welding procedures.

The qualifications have been developed in conjunction with academia and industry experts and informed by the work of professional bodies in the fabrication and welding field. At Level 2 and Level 3, the qualifications have been designed to complement the recently developed Apprenticeship Standards in Welding.

This qualification, along with the rest of the suite, has been endorsed by Lincoln Electric.

Aims

Raise a learner's skill level and enhance their underpinning knowledge to promote progression from basic welding and fabrication skills to a more highly developed understanding of equipment functions and how materials behave when subjected to fabrication and welding process.

Educate the learner in the observation of the correct and safe procedures that are paramount in the fabrication and welding industry.

Target Group

The target group includes, but is not limited to:

- young people who are following an apprenticeship programme
- young people who are new entrants to the industry
- adults wishing to specialise or upskill by pursuing single units
- the self-employed

Qualification Structure

Rules of Combination:

Learners must achieve a minimum of 29 credits

11 credits must come from Group A

6 credits must come from Group B

6 credits must come from Group C

6 credits must come from Group D

| Un | its | | Unit Number | M/O | Level | Credit Value | GLH |

GLH: 250 hours, TQT: 290 hours, Credit value: 29

Assessment

In order to successfully achieve this qualification a learner must fully meet all of the learning outcomes. This is done by completing the Skills and Education Group Awards' practical and online multiple-choice assessments.

All centres are required to have internal quality assurance processes in place. Assessment workbooks are available on the Skills and Education Group Awards website for learners to complete to form the internal assessment requirements for each unit. The practical tasks in the workbooks are graded at a pass, merit or distinction.

The Science and Calculations unit is assessed via an externally set and externally assessed multiple choice question (MCQ) assessment. The examination provides the grade for this unit at a:

- Pass 60%
- Merit 70% or
- Distinction 80%.

The overall qualification is graded as pass/fail however, unit achievements at pass, merit or distinction are shown on the qualification transcript.

For further information around assessment including reasonable adjustments and special considerations please review the Access to Assessment Policy here:

https://skillsandeducationgroupawards.co.uk/policies-and-procedures/

Practice Assessment Material

Skills and Education Group Awards will make paper-based, multiple choice, practice tests available for learners prior to undertaking the online knowledge test. These questions will be of a comparable level and cover the same subject areas as listed above in the 'assessment' section, but they will not be the same questions as those presented during the online knowledge test.

Teaching Strategies and Learning Activities

Centres should adopt a delivery approach which supports the development of all individuals. The aims and aspirations of all the learners, including those with identified special needs or learning difficulties/disabilities, should be considered and appropriate support mechanisms put in place.

Progression Opportunities

Learners who successfully achieve this qualification could progress into employment within a fabrication and welding environment or a manufacturing environment.

Tutor/Assessor Requirements

Skills and Education Group Awards require those involved in the assessment process to be suitably experienced and/or qualified. In general terms, this usually means that the Tutor/Assessor must be knowledgeable in the subject/occupational area to at least the level they are delivering/assessing at.

Those responsible for Internal Quality Assurance (IQA) must be knowledgeable of the subject/occupational area to a suitable level to carry out accurate quality assurance practices and processes.

Resource Requirements

Centres must provide access to sufficient equipment in the centre or workplace to ensure learners have the opportunity to cover all of the practical activities.

For external assessments the examination should be conducted at the Centre where the course delivery has taken place and should be carried out in accordance with the examination requirements of Skills and Education Group Awards.

Language

These specifications and associated assessment materials are in English only.

Unit Details

1. Health and Safety in a Fabrication and Welding Environment

| Unit Reference | T/618/0753 |
|---|---|
| Level | 2 |
| Credit Value | 3 |
| Guided Learning Hours | 20 |
| Unit Summary | In this unit, learners will find out about health and safety legislation, and the application of safe working practices within a workplace. They will explore hazards and precautions, signs and symbols and basic safety procedures. Health and Safety must be an integral part of every learner's programme. It is expected that the outcomes listed will be integrated as appropriate into each unit of this qualification. Skills and Education Group Awards has produced a workbook which learners can use to provide evidence of achievement against the learning outcomes and assessment criteria. The workbook is available on the SEG website. Skills and Education Group Awards also provides Learner Achievement Checklists to record achievement. These are also available on SEG's website. |
| Learning Outcomes The learner will: | Assessment Criteria The learner can: |
| Know about health and safety responsibilities | 1.1. Identify the basic responsibilities of employer and employee with regard to Health and Safety at Work Act 1974 (where legislation, regulations do not apply in the jurisdiction, relevant ones should be applied) 1.2 Identify the statutory requirements and legislation of the Health and Safety at Work in a fabrication and welding work environment |

| 2. Know how to avoid risks in a fabrication and welding work environment | 2.1. Identify and describe where potential health and safety hazards may occur within a fabrication and welding work environment 2.2 Identify potential hazards and the necessary precautions in a fabrication and welding environment for each of the following when moving and handling materials when using hand and power tools when using thermal processes |
|--|--|
| 3. Undertake a risk assessment of fabrication and welding work environment | 3.1 Identify the five steps of a risk assessment 3.2 Conduct a risk assessment of a fabrication and welding work environment 3.3 Report findings to an appropriate person in line with organisational requirements |
| 4. Know how to protect themselves in a work environment | 4.1 State reasons why protective clothing and equipment should be worn 4.2 Identify common safety guards, screens and fences within a workshop situation 4.3 Locate fire extinguishers, emergency switches and exits in the work environment 4.4 Describe how waste materials should be dealt with to comply with current laws and regulations |
| 5. Know about accident and emergency procedures | 5.1 Describe their organisational accident and emergency procedures in relation to injury to self or others fire malfunctions of equipment problems with hazardous substances |
| 6. Understand safety signs | 6.1 Identify safety signs within the following groups mandatory warning safe condition prohibited |

2. Materials, Science and Calculations for Fabrication and Welding Practice

| Unit Reference | D/616/1266 |
|-----------------------|---|
| Level | 3 |
| Credit Value | 8 |
| Guided Learning Hours | 80 |
| Unit Summary | Learners will understand differences in various metals, the way in which they are identified and the properties each have which will allow them to be used for certain applications and how materials are supplied to industry in different forms, sizes and profiles. Introductions to the application and use of welding terms and symbols are covered relating to fillet and butt welded joints. Simple applications of science are covered to enable the learner to understand how materials behave during the application of heat. This unit also covers the basic application of mathematics related to welding and fabrication activities and at a level that the learner should be able to understand and use confidently. |
| | This unit is assessed by a 30 question externally set MCQ (multiple choice question) examination. |

| Learning Outcomes The learner will: | Assessment Criteria The learner can: |
|--|--|
| | 1.1 Identify the difference between ferrous and non- ferrous materials |
| | 1.2 Identify the use of ferrous materials, to include: low, medium and high carbon steels grey cast iron stainless steel |
| Know about ferrous and non-ferrous materials | 1.3 Define the constituent elements in the ferrous materials listed in 1.2. |
| | 1.4 Identify the use of non-ferrous materials, to include:aluminiumcopper |
| | 1.5 Define the melting point of the non-ferrous materials listed in 1.4 |
| 2. Know about | 2.1 Define the physical properties of the materials listed in 1.2 and 1.4, to include: colour weight thermal conductivity electrical conductivity corrosion resistance ability to be magnetised |
| physical and mechanical properties of materials | 2.2 Define the mechanical properties of the materials listed in 1.2 and 1.4, to include: strength (tensile, compressive and shear) malleability elasticity ductility plasticity hardness brittleness toughness |

| 3. Know about forms of supply | 3.0 Define forms of supply in terms of size and shape, to include: sheet plate pipe/tube wires and rods equal angle section channel sections square and rectangular hollow section extrusions forgings |
|---|---|
| 4. Know about the effects of heat | 4.1. Define heat transfer, to include: conduction convection radiation 4.2. Explain the effects of heat relating to welding activities: thermal conductivity in materials expansion/distortion rapid cooling effects on mechanical properties of low carbon steel |
| | 4.3. Identify the effects when different types of forces are applied to a material, to include: tensile force compressive force shear force to include: tensile force compressive force shear force torsion |
| 5. Know about gases used in welding | 5.1. Identify gases found in each of the groups listed: Inert Flammable reactive 5.2. State the flame temperatures of common flammable gases when mixed with oxygen: |
| | 5.3. State the advantages of gas mixtures when using gas shielded welding processes |
| 6. Be able to carry out | 6.1. Perform calculations, to include: area length volume cost |
| calculations relating to welding and fabrication activities | 6.2 Use calculations that include: decimals percentages averages ratios |
| | 6.3 Perform simple calculations relating to welding costs |

| 7. Know about welding symbols | Identify welding symbols that meet current standards when used in butt and fillet welded joints, to include: Symbolic representation Weld size (leg length) Position of welding Site weld |
|-------------------------------|---|
|-------------------------------|---|

3. Manual Metal-Arc Welding - Low Carbon Steel

| Unit References | H/618/0754 |
|---|---|
| Level | 2 |
| Credit Value | 6 |
| Guided Learning Hours | 50 |
| Unit Summary | The unit covers the equipment and consumables required for manual metal-arc (MMA) welding and the techniques used to produce welds that meet the quality standard required. Practical weld samples covering butt and fillet welds must be welded in the flat (PA) or horizontal vertical (PB) welding positions. These are rigorously tested to show that the completed welds are structurally sound. Welding inspection techniques are also covered to give the learner the information and skills to carry out weld in the strice. |
| | Health and safety is an integral part of this unit as learners need to be aware of the dangers of fires and the importance of wearing correct PPE. |
| Learning Outcomes The learner will: | Assessment Criteria The learner can: |
| 1. Know about safe working practices when using MMA welding equipment | 1.1 Identify the need to use appropriate PPE (personal protective equipment) when carrying out manual metal welding activities 1.2 Identify associated risks when welding with MMA, to include: arc radiation burns arc eye burns from handling hot materials welding fumes electric shocks fire sparks |
| | 1.3 Identify fire prevention and emergency procedures required in the workplace, to include:causes of fire |

| | | types of fire extinguisher used |
|----|---------------------|--|
| | | evacuation procedures |
| | | C. 33343.317 p. 33343.133 |
| | | 1.4 Identify the main groups of safety signs, to |
| | | include: |
| | | |
| | | warning |
| | | prohibition |
| | | mandatory |
| | | information signs |
| | | 2.1 Identify the function of the listed equipment when |
| | | used with MMA welding activities: |
| | | transformer/generators |
| | | transformer/rectifiers |
| 2. | Know about the | welding lead |
| | equipment used for | welding return lead |
| | MMA welding | welding earth |
| | | electrode holders |
| | | |
| | | 2.2 Identify ancillary equipment used when welding |
| | | with the MMA welding process |
| | | 3.1. Identify suitable storage conditions for manual |
| 3. | Know about | metal welding electrodes: |
| | welding | |
| | consumables used | 3.2. Identify the electrode in terms of: |
| | in MMA welding | size by electrode diameter |
| | | flux coating type |
| | | 4.1 Identify appropriate safety checks on MMA |
| | | welding equipment prior to use |
| | | 4.2 Propage to carry out MMA wolding to produce |
| | | 4.2 Prepare to carry out MMA welding to produce welded joints in the PA or PB positions, to |
| | | include: |
| | | production of the correct welding preparation |
| | | identify distortion control methods to be used |
| | | select the correct electrode type/size |
| | | • • • |
| 4. | Know about | set the correct welding current produce suitable tack welds |
| | material | produce suitable tack welds |
| | preparation and the | weld the joint |
| | setting up of MMA | post weld cleaning |
| | welding equipment | |
| | | 4.3 Identify welding parameters to be used when |
| | | completing welded joints using MMA welding, to |
| | | include: |
| | | welding current |
| | | electrode slope and tilt angles |
| | | arc length |
| | | electrode polarity |
| | | 5.555.555 p.5.67 |
| | | |
| | | |

| | 5.1 | Identify suitable safety checks on welding equipment prior to use |
|--|-----|---|
| 5. Be able to complete a weld on either low carbon steel, stainless steel or aluminium using the MMA welding process | 5.2 | Complete a weld on: low carbon steel greater than 6 mm in thickness or stainless steel in materials greater than 3mm in thickness or aluminium in materials greater than 3mm in thickness using the MMA welding process, to include as a minimum: lap joint open outside corner single vee butt joint tee fillet weld |
| | 6.1 | Welds to be completed in the PA or PB position Describe the limitations of visual inspection on |
| | | completed welded joints using the MMA welding process |
| 6. Know how to carry out and report on the inspection of butt and fillet welded joints | 6.2 | Identify and describe typical welding defects that may be found in MMA welded joints, to include: undercut cracks slag inclusions porosity arc craters lack of penetration |
| | 6.3 | Check completed welds for: weld size to include leg length and throat thickness weld profile weld appearance and uniformity absence of surface defects |
| | 6.4 | Complete the requirements for a report document on welds produced |
| 7. Know how to carry out destructive tests on completed MMA welded joints | 7.1 | Prepare and carry out a destructive test on a fillet weld in accordance with the supplied drawing of the welded joint, to include: • nick break test |
| | 7.2 | Prepare and carry out destructive tests on a completed single vee butt weld in accordance with the supplied drawing of the welded joint, to include: • face bend test |

| | root bend test |
|-----------------------------|---|
| | fracture test |
| 8. Know about documentation | 8.1. Identify appropriate documentation relating to welding activities, to include: |
| relating to welding | Welding procedure specifications (WPS) |
| activities | weld inspection report |

4. Manual Metal-Arc Welding - Stainless Steel

| Unit References | J/618/0756 |
|--|--|
| Level | 2 |
| Credit Value | 6 |
| Guided Learning Hours | 50 |
| Unit Summary | The unit covers the equipment and consumables required for manual metal-arc (MMA) welding and the techniques used to produce welds that meet the quality standard required. Practical weld samples covering butt and fillet welds must be welded in the flat (PA) or horizontal vertical (PB) welding positions. These are rigorously tested to show that the completed welds are structurally sound. Welding inspection techniques are also covered to give the learner the information and skills to carry out weld inspection. Health and safety is an integral part of this unit as learners need to be aware of the dangers of fires and the importance of wearing correct PPE. |
| Learning Outcomes The learner will: | Assessment Criteria The learner can: |
| Know about safe working practices when using MMA welding equipment | 1.1 Identify the need to use appropriate PPE (personal protective equipment) when carrying out manual metal welding activities 1.2 Identify associated risks when welding with MMA, to include: arc radiation burns arc eye burns from handling hot materials welding fumes electric shocks fire sparks |

| 6 Know how to carry out and report on the inspection of butt and fillet | 6.1 Describe the limitations of visual inspection on completed welded joints using the MMA welding process |
| welded joints | 6.2 Identify and describe typical welding defects that may be found in MMA welded joints, to include: undercut cracks slag inclusions porosity arc craters lack of penetration |
| | 6.3 Check completed welds for: weld size to include leg length and throat thickness weld profile weld appearance and uniformity absence of surface defects |
| | 6.4 Complete the requirements for a report document on welds produced |
| 7 Know how to carry out destructive tests on completed MMA welded joints | 7.1 Prepare and carry out a destructive test on a fillet weld in accordance with the supplied drawing of the welded joint, to include: nick break test |
| | 7.2 Prepare and carry out destructive tests on a completed single vee butt weld in accordance with the supplied drawing of the welded joint, to include: face bend test root bend test fracture test |
| 8 Know about documentation relating to welding activities | 8.1 Identify appropriate documentation relating to welding activities, to include: welding procedure specifications (WPS) weld inspection report |

5. Metal-Arc Gas Shielded Welding - Low Carbon Steel

| Unit References | L/618/0757 |
|-----------------------|--|
| Level | 2 |
| Credit Value | 6 |
| Guided Learning Hours | 50 |
| Unit Summary | The unit covers the equipment and consumables required for metal-arc gas shielded (MAGS) welding and the techniques used to produce welds that meet the quality standard required. |
| | Practical weld samples covering butt and fillet welds must be welded in the flat (PA) or horizontal vertical (PB) welding positions. These are rigorously tested to show that the completed welds are structurally sound. Welding inspection techniques are also covered to give the learner the information and skills to carry out weld inspections. |
| | Health and safety is an integral part of this unit covering MAGS welding activities. Learners need to be aware of the dangers of fires and the need to wear correct PPE. |

| Learning Outcomes The learner will: | Assessment Criteria The learner can: |
|---|--|
| Know about safe working practices when using MAGS welding equipment | 1.1 Identify the need to use appropriate PPE (personal protective equipment) when carrying out MAGS welding activities |
| | Identify the risks associated when welding with MAGS, to include: arc radiation burns arc eye burns from handling hot materials welding fumes electric shocks fire sparks |

| | 1.3 Identify fire prevention and emergency procedures required in the workplace, to include: causes of fire types of fire extinguisher used evacuation procedures 1.4 Identify the main groups of safety signs, to include: warning prohibition mandatory |
|---|--|
| 2 Know about the equipment used for MAGS welding | information signs 2.1 Identify the function of the listed equipment when used with MAGS welding activities: power source unit welding lead welding return lead welding earth welding torch wire feed unit shielding gas supply, regulator and flow meter 2.2 Identify ancillary equipment used when welding |
| 3 Know about | with the MAGS welding process 3.1 Identify suitable storage conditions for MAGS |
| welding consumables used in MAGS welding | welding wires 3.2 Identify the electrode wires in terms of: |
| 4 Know about material | 4.1 Identify appropriate safety checks on MAGS welding equipment prior to use |
| preparation and the setting up of MAGS welding equipment | 4.2 Prepare to carry out the MAGS welding process to produce welded joints in the PA or PB positions, to include: production of the correct welding preparation identify distortion control methods to be used select the correct wire size select correct gas flow rates set the correct welding current produce suitable tack welds weld the joint post welding cleaning |
| | 4.3 Identify welding parameters to be used when completing welded joints using MAGS welding, to include: welding current gas type and flow rates welding torch slope and tilt angle |
| 5 Be able to complete a weld on | 5.1 Identify suitable safety checks on welding equipment prior to use |

| either low carbon steel plate, stainless steel or aluminium using the MAGS welding process | 5.2 Complete a weld on: low carbon steel greater than 6 mm in thickness or using the MAGS welding process, to include as a minimum: lap joint open outside corner single vee butt joint tee fillet weld Welds to be completed in the PA or PB position |
|---|--|
| 6 Know how to carry out and report on the visual inspection of butt and fillet welded | 6.1 Describe the limitations of visual inspections on completed welded joints when using the MAGS welding process6.2 Identify and describe typical welding defects that |
| joints | may be found in MAGS welded joints, to include: undercut cracks inclusions porosity arc craters lack of fusion lack of penetration |
| | 6.3 Check completed welds for: weld size to cover leg length and throat thickness weld profile weld appearance and uniformity absence of surface defects |
| | 6.4 Complete the requirements for a report document on welds produced |
| 7 Know how to carry out destructive tests on completed MAGS welded joints | weld in accordance with the supplied drawing of the welded joint, to include: • nick break test |
| | 7.2 Prepare and carry out destructive tests on a completed single vee butt weld in accordance with the supplied drawing of the welded joints, to include: face bend test root bend test fracture test |
| 8 Know about documentation relating to welding activities | 8.1 Identify appropriate documentation relating to welding activities, to include: welding procedure specifications (WPS) weld inspection report |

| Learning Outcomes The learner will: | Assessment Criteria The learner can: |
|---|--|
| Know about safe working practices when using MAGS welding equipment | 1.1 Identify the need to use appropriate PPE (personal protective equipment) when carrying out MAGS welding activities |
| | Identify the risks associated when welding with MAGS, to include: arc radiation burns arc eye burns from handling hot materials welding fumes electric shocks fire sparks |
| | 1.3 Identify fire prevention and emergency procedures required in the workplace, to include: causes of fire types of fire extinguisher used evacuation procedures |

| | 1.4 Identify the main groups of safety signs, to include: warning prohibition mandatory information signs |
|--|---|
| 2 Know about the equipment used for MAGS welding | 2.1 Identify the function of the listed equipment when used with MAGS welding activities: power source unit welding lead welding return lead welding earth welding torch wire feed unit shielding gas supply, regulator and flow meter 2.2 Identify ancillary equipment used when welding |
| 3 Know about | with the MAGS welding process 3.1 Identify suitable storage conditions for MAGS |
| welding consumables used | welding wires |
| in MAGS welding | 3.2 Identify the electrode wires in terms of: size by electrode diameter weight of spool copper coated type |
| 4 Know about material preparation and the setting up of MAGS welding equipment | 4.1 Identify appropriate safety checks on MAGS welding equipment prior to use 4.2 Prepare to carry out the MAGS welding process to produce welded joints in the PA or PB positions, to include: production of the correct welding preparation identify distortion control methods to be used select the correct wire size select correct gas flow rates set the correct welding current produce suitable tack welds weld the joint post welding cleaning 4.3 Identify welding parameters to be used when completing welded joints using MAGS welding, to include: welding current gas type and flow rates welding torch slope and tilt angle |
| 5 Be able to complete a weld on either low carbon steel plate, | 5.1 Identify suitable safety checks on welding equipment prior to use5.2 Complete a weld on: |
| stainless steel or aluminium using the MAGS welding process | stainless steel in materials greater than 3mm in thickness using the MAGS welding process, to include as a minimum: |

| | lap joint |
|--|--|
| | open outside corner |
| | single vee butt joint |
| | • tee fillet weld |
| | - tee fillet weld |
| | Welds to be completed in the PA or PB position |
| 6 Know how to carry | 6.1 Describe the limitations of visual inspections on |
| out and report on the visual inspection of butt | completed welded joints when using the MAGS welding process |
| and fillet welded joints | 6.2 Identify and describe typical welding defects that may be found in MAGS welded joints, to include:undercut |
| | • cracks |
| | • inclusions |
| | porosityarc craters |
| | lack of fusion |
| | lack of penetration |
| | 6.3 Check completed welds for: |
| | weld size to cover leg length and throat |
| | thickness |
| | weld profile |
| | weld appearance and uniformityabsence of surface defects |
| | • absence of surface defects |
| | 6.4 Complete the requirements for a report document on welds produced |
| 7 Know how to carry out destructive tests on completed MAGS welded | 7.1 Prepare and carry out a destructive test on a fillet weld in accordance with the supplied drawing of the welded joint, to include: nick break test |
| joints | 7.2 Prepare and carry out destructive tests on a completed single vee butt weld in accordance with the supplied drawing of the welded joints, to include: face bend test root bend test fracture test |
| 8 Know about documentation relating to welding | 8.1 Identify appropriate documentation relating to welding activities, to include: welding procedure specifications (WPS) |
| activities | weld inspection report |

7. Metal-Arc Gas Shielded Welding – Aluminium

| Unit References | Y/618/0759 | |
|-----------------------|--|--|
| Level | 2 | |
| Credit Value | 6 | |
| Guided Learning Hours | 50 | |
| Unit Summary | The unit covers the equipment and consumables required for metal-arc gas shielded (MAGS) welding and the techniques used to produce welds that meet the quality standard required. | |
| | Practical weld samples covering butt and fillet welds must be welded in the flat (PA) or horizontal vertical (PB) welding positions. These are rigorously tested to show that the completed welds are structurally sound. Welding inspection techniques are also covered to give the learner the information and skills to carry out weld inspections. | |
| | Health and safety is an integral part of this unit covering MAGS welding activities. Learners need to be aware of the dangers of fires and the need to wear correct PPE. | |

| Learning Outcomes The learner will: | Assessment Criteria The learner can: |
|---|--|
| Know about safe working practices when using MAGS welding equipment | 1.1 Identify the need to use appropriate PPE (personal protective equipment) when carrying out MAGS welding activities |
| | 1.2 Identify the risks associated when welding with MAGS, to include: arc radiation burns arc eye burns from handling hot materials welding fumes electric shocks fire sparks |
| | 1.3 Identify fire prevention and emergency procedures required in the workplace, to include: causes of fire types of fire extinguisher used evacuation procedures |

| 2 Know about the equipment used for MAGS welding | 1.4 Identify the main groups of safety signs, to include: warning prohibition mandatory information signs 2.1 Identify the function of the listed equipment when used with MAGS welding activities: power source unit welding lead welding return lead welding earth welding torch wire feed unit shielding gas supply, regulator and flow meter |
|---|---|
| 2.16 | 2.2 Identify ancillary equipment used when welding with the MAGS welding process |
| 3 Know about welding consumables used in MAGS welding | 3.1 Identify suitable storage conditions for MAGS welding wires 3.2 Identify the electrode wires in terms of: size by electrode diameter weight of spool copper coated type |
| 4 Know about material preparation and the setting up of MAGS welding equipment | 4.1 Identify appropriate safety checks on MAGS welding equipment prior to use 4.2 Prepare to carry out the MAGS welding process to produce welded joints in the PA or PB positions, to include: production of the correct welding preparation identify distortion control methods to be used select the correct wire size select correct gas flow rates set the correct welding current produce suitable tack welds weld the joint post welding cleaning 4.3 Identify welding parameters to be used when completing welded joints using MAGS welding, to include: welding current gas type and flow rates welding torch slope and tilt angle |
| 5 Be able to complete a weld on either low carbon steel plate, stainless steel or | 5.1 Identify suitable safety checks on welding equipment prior to use |
| aluminium using | 5.2 Complete a weld on: |

| the MAGS welding process | aluminium in materials greater than 3mm in thickness using the MAGS welding process, to include as a minimum: lap joint open outside corner single vee butt joint tee fillet weld Welds to be completed in the PA or PB position |
|---|--|
| 6 Know how to carry out and report on the visual inspection of butt | 6.1 Describe the limitations of visual inspections on completed welded joints when using the MAGS welding process |
| and fillet welded joints | 6.2 Identify and describe typical welding defects that may be found in MAGS welded joints, to include: undercut cracks inclusions porosity arc craters lack of fusion lack of penetration |
| | 6.3 Check completed welds for: weld size to cover leg length and throat thickness weld profile weld appearance and uniformity absence of surface defects |
| | 6.4 Complete the requirements for a report document on welds produced |
| 7 Know how to carry out destructive tests on completed MAGS welded joints | 7.1 Prepare and carry out a destructive test on a fillet weld in accordance with the supplied drawing of the welded joint, to include: nick break test |
| | 7.2 Prepare and carry out destructive tests on a completed single vee butt weld in accordance with the supplied drawing of the welded joints, to include: face bend test root bend test fracture test |
| 8 Know about documentation relating to welding activities | 8.1 Identify appropriate documentation relating to welding activities, to include: welding procedure specifications (WPS) weld inspection report |

8. Tungsten-Arc Gas Shielded Welding – Low Carbon Steel

| Unit References | L/618/0760 | |
|-----------------------|---|--|
| Level | 2 | |
| Credit Value | 6 | |
| Guided Learning Hours | 50 | |
| Unit Summary | The unit covers the equipment and consumables required for tungsten-arc gas shielded (TAGS) welding and the techniques used to produce welds that meet the quality standard required. Practical weld samples covering butt and fillet welds must be welded in the flat (PA) or horizontal vertical (PB) welding positions. These are rigorously tested to show that the completed welds are structurally sound. Welding inspection techniques are also covered to give | |
| | the learner the information and skills to carry out weld inspections. Health and safety is an integral part of this unit covering TAGS welding activities. Learners need to be aware of the dangers of fires and the need to wear correct PPE. | |

| Learning Outcomes The learner will: | Assessment Criteria The learner can: | |
|---|---|--|
| Know about safe working practices when using TAGS welding equipment | 1.1 Identify the need to use appropriate PPE (personal protective equipment) when carrying out TAGS welding activities | |
| | 1.2 Identify the risks associated when welding with TAGS, to include: arc radiation burns arc eye burns from handling hot materials welding fumes dangers of using high frequency systems electric shocks fire | |
| | 1.3 Identify fire prevention and emergency procedures required in the workplace, to include:causes of fire | |

| | types of fire extinguisher usedevacuation procedures |
|---|--|
| | 1.4 Identify the main groups of safety signs, to include: warning prohibition mandatory information signs |
| 2. Know about the equipment used for TAGS welding | 2.1 Identify the functions of the listed equipment when used with TAGS welding activities, to include: transformer/generators transformer/rectifiers welding inverters high frequency units cooling systems welding lead welding return lead welding earth welding shrouds |
| | 2.2 Identify ancillary equipment used when welding with the TAGS welding process |
| 3. Know about welding consumables used in TAGS welding | 3.1 Identify suitable storage conditions for TAGS filler wires 3.2 Identify the filler wires in terms of: size by diameter alloying additions |
| | 3.3 Identify the electrode in terms of: size by electrode diameter type of electrodes - alloying additions |
| 4. Know about material preparation and the setting up of TAGS welding equipment | 4.1 Identify appropriate safety checks on TAGS welding equipment prior to use 4.2 Prepare to carry out the TAGS welding process to produce welded joints in the PA or PB positions, to include: production of the correct welding preparation identify distortion control methods to be used select the correct electrode type/size select gas type and flow rate select filler wire type set the correct welding current produce suitable tack welds weld the joint post welding cleaning |
| | 4.3 Identify welding parameters to be used when completing welded joints using TAGS welding, to include: |

| 5. Be able to complete a weld on either low carbon steel plate, stainless steel or aluminium using the TAGS welding process | welding current electrode slope and tilt angles filler wire slope and tilt angles gas flow rates arc length electrode polarity 5.1 Identify suitable safety checks on welding equipment prior to use 5.2 Complete welds on low carbon steel 3 mm or greater in thickness using the TAGS welding process, to include as a minimum: lap joint open outside corner single vee butt joint tee fillet weld |
|---|--|
| | Welds to be completed in the PA or PB position |
| 6. Know how to carry out and report on the visual inspection | 6.1 Describe the limitations of visual inspection on completed welded joints when using the TAGS welding process |
| of butt and fillet welded joints using the TAGS welding process | 6.2 Identify and describe typical welding defects that may be found in TAGS welded joints, to include: undercut cracks tungsten inclusions porosity arc craters lack of fusion lack of penetration |
| | 6.3 Check completed welds for: weld size to cover leg length and throat thickness weld profile weld appearance and uniformity absence of surface defects |
| | 6.4 Complete the requirements for a report document on welds produced |
| 7. Know how to carry out destructive tests on completed TAGS welded | 7.1 Prepare and carry out a destructive test on a fillet weld in accordance with the supplied drawing of the welded joint, to include: nick break test |
| joints | 7.2 Prepare and carry out destructive tests on a completed single vee butt weld in accordance with the supplied drawing of the welded joint, to include: face bend test root bend test fracture test |

| Know about | 8.1 | Identify appropriate documentation relating to |
|------------------------------|-----|--|
| documentation | | welding activities, to include: |
| relating to | | welding procedure specifications (WPS) |
| welding | | weld inspection report |
| activities | | |

9. Tungsten-Arc Gas Shielded Welding – Stainless Steel

| Unit References | R/618/0761 | |
|-----------------------|--|--|
| Level | 2 | |
| Credit Value | 6 | |
| Guided Learning Hours | 50 | |
| Unit Summary | The unit covers the equipment and consumables required for tungsten-arc gas shielded (TAGS) welding and the techniques used to produce welds that meet the quality standard required. | |
| | Practical weld samples covering butt and fillet welds must be welded in the flat (PA) or horizontal vertical (PB) welding positions. These are rigorously tested to show that the completed welds are structurally sound. Welding inspection techniques are also covered to give the learner the information and skills to carry out weld inspections. | |
| | Health and safety is an integral part of this unit covering TAGS welding activities. Learners need to be aware of the dangers of fires and the need to wear correct PPE. | |

| Learning Outcomes The learner will: | Assessment Criteria The learner can: | |
|---|---|--|
| Know about safe working practices when using TAGS welding equipment | 1.1 Identify the need to use appropriate PPE (personal protective equipment) when carrying out TAGS welding activities | |

| | c: |
|---|--|
| | • fire |
| | 1.3 Identify fire prevention and emergency procedures required in the workplace, to include: causes of fire types of fire extinguisher used evacuation procedures |
| | 1.4 Identify the main groups of safety signs, to include: warning prohibition mandatory information signs |
| 2. Know about the equipment used for TAGS welding | 2.1 Identify the functions of the listed equipment when used with TAGS welding activities, to include: transformer/generators transformer/rectifiers welding inverters high frequency units cooling systems welding lead welding return lead welding earth welding shrouds 2.2 Identify ancillary equipment used when welding |
| 2 Know shout | with the TAGS welding process |
| 3. Know about welding consumables | 3.1 Identify suitable storage conditions for TAGS filler wires |
| used in TAGS welding | 3.2 Identify the filler wires in terms of:size by diameteralloying additions |
| | 3.3 Identify the electrode in terms of:size by electrode diametertype of electrodes - alloying additions |
| 4. Know about material preparation and | 4.1 Identify appropriate safety checks on TAGS welding equipment prior to use |
| the setting up of TAGS welding equipment | 4.2 Prepare to carry out the TAGS welding process to produce welded joints in the PA or PB positions, to include: production of the correct welding preparation identify distortion control methods to be used select the correct electrode type/size select gas type and flow rate select filler wire type set the correct welding current produce suitable tack welds weld the joint |

| | post welding cleaning |
|---|---|
| | 4.3 Identify welding parameters to be used when completing welded joints using TAGS welding, to include: welding current electrode slope and tilt angles filler wire slope and tilt angles gas flow rates arc length electrode polarity |
| 5. Be able to complete a weld on either low | 5.1 Identify suitable safety checks on welding equipment prior to use |
| carbon steel plate, stainless steel or aluminium using the TAGS welding process | 5.2 Complete welds on stainless steel 3 mm or greater in thickness using the TAGS welding process, to include as a minimum: lap joint open outside corner single vee butt joint tee fillet weld Welds to be completed in the PA or PB position |
| 6. Know how to carry out and report on the | 6.1 Describe the limitations of visual inspection on completed welded joints when using the TAGS welding process |
| visual inspection of butt and fillet welded joints using the TAGS welding process | 6.2 Identify and describe typical welding defects that may be found in TAGS welded joints, to include: undercut cracks tungsten inclusions porosity arc craters lack of fusion lack of penetration |
| | 6.3 Check completed welds for: weld size to cover leg length and throat thickness weld profile weld appearance and uniformity absence of surface defects |
| | 6.4 Complete the requirements for a report document on welds produced |
| 7. Know how to carry out destructive tests on completed TAGS welded | 7.1 Prepare and carry out a destructive test on a fillet weld in accordance with the supplied drawing of the welded joint, to include: nick break test |
| joints | 7.2 Prepare and carry out destructive tests on a completed single vee butt weld in accordance |

| | with the supplied drawing of the welded joint, to include: face bend test root bend test fracture test |
|--|--|
| 8. Know about documentation relating to welding activities | 8.1 Identify appropriate documentation relating to welding activities, to include: welding procedure specifications (WPS) weld inspection report |

10. Tungsten-Arc Gas Shielded Welding – Aluminium

| Unit References | Y/618/0762 |
|-----------------------|--|
| Level | 2 |
| Credit Value | 6 |
| Guided Learning Hours | 50 |
| Unit Summary | The unit covers the equipment and consumables required for tungsten-arc gas shielded (TAGS) welding and the techniques used to produce welds that meet the quality standard required. |
| | Practical weld samples covering butt and fillet welds must be welded in the flat (PA) or horizontal vertical (PB) welding positions. These are rigorously tested to show that the completed welds are structurally sound. Welding inspection techniques are also covered to give the learner the information and skills to carry out weld inspections. |
| | Health and safety is an integral part of this unit covering TAGS welding activities. Learners need to be aware of the dangers of fires and the need to wear correct PPE. |

| Learning Outcomes The learner will: | Assessment Criteria The learner can: |
|---|--|
| Know about safe working practices when using TAGS welding equipment | 1.1 Identify the need to use appropriate PPE (personal protective equipment) when carrying out TAGS welding activities |

| | 1.2 Identify the risks associated when welding with TAGS, to include: arc radiation burns arc eye burns from handling hot materials welding fumes dangers of using high frequency systems electric shocks fire |
|--|---|
| | 1.3 Identify fire prevention and emergency procedures required in the workplace, to include: causes of fire types of fire extinguisher used evacuation procedures |
| | 1.4 Identify the main groups of safety signs, to include: warning prohibition mandatory information signs |
| 2 Know about the equipment used for TAGS welding | 2.1 Identify the functions of the listed equipment when used with TAGS welding activities, to include: transformer/generators transformer/rectifiers welding inverters high frequency units cooling systems welding lead welding return lead welding earth welding shrouds |
| | 2.2 Identify ancillary equipment used when welding with the TAGS welding process |
| 3 Know about welding consumables used in TAGS welding | 3.1 Identify suitable storage conditions for TAGS filler wires |
| | 3.2 Identify the filler wires in terms of:size by diameteralloying additions |
| | 3.3 Identify the electrode in terms of: size by electrode diameter type of electrodes - alloying additions |
| 4 Know about material preparation and the setting up of TAGS welding equipment | 4.1 Identify appropriate safety checks on TAGS welding equipment prior to use |

| | process to produce welded joints in the PA or PB positions, to include: • production of the correct welding preparation • identify distortion control methods to be used • select the correct electrode type/size • select gas type and flow rate • select filler wire type • set the correct welding current • produce suitable tack welds • weld the joint • post welding cleaning |
|---|---|
| | 4.3 Identify welding parameters to be used when completing welded joints using TAGS welding, to include: welding current electrode slope and tilt angles filler wire slope and tilt angles gas flow rates arc length electrode polarity |
| 5 Be able to complete a weld on either low carbon steel plate, stainless steel or aluminium using the TAGS welding process | 5.1 Identify suitable safety checks on welding equipment prior to use 5.2 Complete welds on aluminium 3 mm or greater in thickness using the TAGS welding process, to include as a minimum: lap joint open outside corner single vee butt joint tee fillet weld Welds to be completed in the PA or PB |
| 6 Know how to carry out and report on the visual inspection of butt and fillet welded joints using the TAGS welding process | position 6.1 Describe the limitations of visual inspection on completed welded joints when using the TAGS welding process 6.2 Identify and describe typical welding defects that may be found in TAGS welded joints, to include: undercut cracks tungsten inclusions porosity arc craters lack of fusion lack of penetration 6.3 Check completed welds for: |

| | | | weld size to cover leg length and throat thickness weld profile weld appearance and uniformity absence of surface defects |
|---|---|-----|---|
| | | 6.4 | Complete the requirements for a report document on welds produced |
| 7 | Know how to carry out destructive tests on completed TAGS welded joints | 7.1 | Prepare and carry out a destructive test on a fillet weld in accordance with the supplied drawing of the welded joint, to include: • nick break test |
| | | 7.2 | Prepare and carry out destructive tests on a completed single vee butt weld in accordance with the supplied drawing of the welded joint, to include: • face bend test • root bend test • fracture test |
| 8 | Know about documentation relating to welding activities | 8.1 | Identify appropriate documentation relating to welding activities, to include: • welding procedure specifications (WPS) • weld inspection report |

| Unit References | A/618/0771 |
|-------------------------------------|--|
| Level | 3 |
| Credit Value | 7 |
| Guided Learning Hours | 60 |
| Unit Summary | This unit covering tungsten inert gas shielded (TAG) welding is designed to further the skills of the learner who has satisfactorily completed and achieved a level 2 qualification in fabrication and welding practice. Learners will further develop skills in the theory of safe working practice and the theoretical aspects of technology associated with this particular welding process. For this qualification all welding is to be carried out in the vertical welding position (PF/PG) covering a range of welded joints. Both the fillet weld and butt joint will be tested to ensure that they are structurally sound. |
| Learning Outcomes The learner will: | Assessment Criteria The learner can: |

| | 1.1. Identify the responsibilities of both the employer and the employee when complying with the Health and Safety at Work Act 1974 |
|--|--|
| | 1.2. Identify the use of current legislation, to include: COSHH (Control of Substances Hazardous to Health) PUWER (Provision and Use of Work |
| Understand health and safety legislation and | Equipment)RIDDOR (Reporting of Injuries, Diseases, and Dangerous Occurrences Regulations) |
| follow safe working practices | 1.3. Identify the use of a risk assessment procedure |
| | 1.4. Identify safe working practices when using the TAG welding process, to include working: in a confined space at an height above 2 metres with containers that have held chemicals or flammable liquids in damp or wet conditions with hazards from using high frequency units |

| 2. Be able to identify and use, in a safe manner, equipment used for TAG welding activities | 2.1. Describe the function of the equipment used in the TAG welding process, to include: rectifier inverter high frequency units welding lead cable and clamp welding return cable and clamp secondary earth and connector torch tungsten collet shroud cooling system gas supply, regulator and flow meter |
|---|---|
| | 2.2. Identify suitable maintenance checks that would be required on the items listed in 2.1 |
| | 2.3. State the procedures to be followed for the safe storage of welding equipment when the welding activity has been completed |
| | 3.1. Identify a range of tungsten electrodes that are used for the TAG welding process, to include: types used size (diameter) alloying additions preparation of electrode tip (shape/dimensions) |
| 3. Be able to identify consumables used with the TAG | 3.2. Identify a range of filler wires that are used for the TAG welding process, to include: types used size (diameter) alloying additions |
| welding process | 3.3. Describe the effects of incorrect storage of tungsten electrode and filler wires |
| | 3.4. State the effect of using damaged tungsten electrode and filler wires when carrying out welding activities |
| | 3.5. Identify the shielding gas/es used in TAG welding |
| | 3.6. Identify the function of the shielding gas used in TAG welding |

| 4. | Understand the welding parameters used when carrying out TAG welding in the vertical welding (PF/PG) position | 4.1. Identify and select the welding parameters to be used when welding in the vertical welding position (PF/PG): welding current torch slope and tilt angles filler wire slope and tilt angles shielding gas flow rate arc length speed of travel |
|----|---|--|
| | | 4.2. Identify the use of autogenous techniques when using the TAG welding process |
| | | 5.1. Identify suitable welding preparations for the type of joint and material thickness being welded |
| 5. | Know about material preparation and the setting up of TAG welding equipment | 5.2. Identify terms associated with welding preparations, to include: included angle angle of bevel root face dimension root gap dimension 5.3. Describe the application of distortion control techniques, to include: pre-setting restraint joint geometry chills weld sequence |
| | | 5.4. Be able to follow instructions given on a WPS (Welding Procedure Sheet) |
| 6. | Re able to complete | 6.1. Identify appropriate safety checks on the welding equipment prior to use |
| | welds in the vertical welding position (PF/PG) using the TAG welding process | 6.2. Select suitable welding parameters to enable the listed joints to be welded by the TAG welding process on low carbon steel or stainless steel or aluminium tee fillet (PF) butt (PF) open outside corner (PF or PG) lap joint (PF or PG) |

| 7. Know how to carry out visual inspection and destructive tests on | 7.1. Carry out visual inspection of completed welds 7.2. Prepare and carry out nick break tests on completed fillet welds 7.3. Prepare and carry out destructive tests on completed butt welds, to include: face bend |
|--|---|
| completed welds | root bend fracture test 7.4. Record the results of the weld examination as detailed in 7.1, 7.2 and 7.3 |
| 8. Know about defects found in welds produced by the TAG welding process | 8.1. Identify and describe typical defects found in the TAG welding process joints, to include: cracks inclusions undercut lack of fusion arc craters porosity lack of penetration |
| | 8.2. Identify possible causes of the defects listed in 8.1 |

Appendices

Recognition of Prior Learning, Exemption and Credit Transfer

Skills and Education Group Awards policy enables learners to avoid duplication of learning and assessment in a number of ways:

- Recognition of Prior Learning (RPL) a method of assessment that considers whether a learner can demonstrate that they can meet the assessment requirements for a unit through knowledge, understanding or skills they already possess and do not need to develop through a course of learning.
- Exemption Exemption applies to any certificated achievement which is deemed to be
 of equivalent value to a unit within Skills and Education Group Awards qualification but
 which does not necessarily share the exact learning outcomes and assessment criteria.
 It is the assessor's responsibility, in conjunction with the Internal Moderator, to map
 this previous achievement against the assessment requirements of the Skills and
 Education Group Awards qualification to be achieved in order to determine its
 equivalence.

Any queries about the relevance of any certificated evidence, should be referred in the first instance to your centre's internal moderator and then to Skills and Education Group Awards.

It is important to note that there may be restrictions upon a learner's ability to claim exemption or credit transfer which will be dependent upon the currency of the unit/qualification and a learner's existing levels of skill or knowledge. Where past certification only provides evidence that could be considered for exemption of part of a unit, learners must be able to offer additional evidence of previous or recent learning to supplement their evidence of achievement.

- Credit Transfer Skills and Education Group Awards may attach credit to a
 qualification, a unit or a component. Credit transfer is the process of using certificated
 credits achieved in one qualification and transferring that achievement as a valid
 contribution to the award of another qualification. Units / Components transferred must
 share the same learning outcomes and assessment criteria along with the same unit
 number. Assessors must ensure that they review and verify the evidence through sight
 of:
 - original certificates OR
 - copies of certificates that have been signed and dated by the internal moderator confirming the photocopy is a real copy and make these available for scrutiny be the External Moderator.
- Equivalencies opportunities to count credits from the unit(s) from other qualifications
 or from unit(s) submitted by other recognised organisations towards the place of
 mandatory or optional unit(s) specified in the rule of combination. The unit must have
 the same credit value or greater than the unit(s) in question and be at the same level
 or higher.

Skills and Education Group Awards encourages its centres to recognise the previous achievements of learners through RPL, Exemption and Credit Transfer. Prior achievements may have resulted from past or present employment, previous study or voluntary activities.

Centres should provide advice and guidance to the learner on what is appropriate evidence and present that evidence to the external moderator in the usual way.

Further guidance can be found in 'Delivering and Assessing Skills and Education Group Awards Qualifications' which can be downloaded from:

https://skillsandeducationgroupawards.co.uk/wp-content/uploads/2017/12/SEG-Awards Delivering-and-Assessing-Qualifications-19-20.pdf

Certification

Learners will be certificated for all units and qualifications that are achieved and claimed.

Skills and Education Group Awards policies and procedures are available on the Skills and Education Group Awards website.

Guided Learning Hours (GLH)

GLH is where the learner participates in education or training under the immediate guidance or supervision of a tutor (or other appropriate provider of education or training). It may be helpful to think – 'Would I need to plan for a member of staff to be present to give guidance or supervision?'

GLH is calculated at the unit/component level and added up at the qualification level. Examples of guided learning include:

- Face-to-face meeting with a tutor
- Telephone conversation with a tutor
- Instant messaging with a tutor
- Taking part in a live webinar
- Classroom-based instruction
- Supervised work
- Taking part in a supervised or invigilated assessment
- The learner is being observed.

TQT (Total Qualification Time)

The number of notional hours which represents an estimate of the total amount of time that could reasonably be expected to be required, in order for a learner to achieve and demonstrate the achievement of the level of attainment necessary for the award of a qualification.' The size of a qualification is determined by the TQT.

TQT is made up of the GLH plus all other time taken in preparation, study or any other form of participation in education or training but not under the direct supervision of a lecturer, supervisor or tutor.

TQT is calculated at qualification level and not unit/component level.

Examples of unsupervised activities that could contribute to TQT include:

- Researching a topic and writing a report
- Watching an instructional online video at home/e-learning
- Watching a recorded webinar
- Compiling a portfolio in preparation for assessment
- Completing an unsupervised practical activity or work
- Rehearsing a presentation away from the classroom
- Practising skills unsupervised
- Requesting guidance via email will not guarantee an immediate response.
